

Stasbaugh nHance 6EG

The Strasbaugh 6-EG model is an economical tool for chemical mechanical planarization (CMP) research, failure analysis and low volume production. Its semi-automatic operations are programmable through a color touch screen graphical user interface (GUI) for repeatable and accurate process control.

The 6-EG uses the same process control methods, wafer carrier, load station and pad conditioner as the fully automatic 6DS-SP CMP system. The 6-EG is an affordable 300 mm solution.
