

PFAS Policy Statement

Entrepix Inc. is committed to providing our customers with the highest quality products in addition to the responsible use of potentially harmful chemicals throughout our global supply chain.

PFAS are a class of manufactured chemicals that have been used in industrial and consumer products since the 1940s; there are thousands of different PFAS, some of which have been more widely used and studied than others.

Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS), for example, are two of the most widely used and studied chemicals in the PFAS group. PFOA and PFOS have been replaced in the United States with other PFAS in recent years. Current scientific research suggests that exposure to certain PFAS may lead to adverse health outcomes. Additional research is underway to better understand the health effects associated with low levels of exposure to PFAS over long periods of time, especially in children.

In 2021, the U.S. Environmental Protection Agency unveiled [a roadmap](#) listing how it would curtail PFAS contamination in the United States. Entrepix Inc. remains engaged in following the process of the EPA's PFAS initiative and is prepared to act should any regulations be forthcoming.
